

SEMINAL FLUID Semen analysis

From Monday to Friday! The test is not performed on Saturday!

A specific container (which can be collected at CUP) is needed.

The collection is to be performed after a period of sexual abstinence no shorter than three days and no longer than seven.

The seminal fluid is to be collected in the morning via masturbation, after having performed an accurate intimate hygiene.

After the collection:

- eliminate the funnel
- close the tube with the cap
- sign the time of the collection on the sample
- wrap the test tube in absorbent cotton and then in aluminium foil

The sample must be maintained and transported between 20°- 37°C and delivered within an hour of collection

After having made the administrative acceptance, send the sample tube within 8.30 a.m.
